SANSSupport™ Software Upgrade Plan

SANSSupport Software Upgrade Plan for your Sony and SANS Language Learning Software is like having insurance for your technology plan, providing consistent, timely software upgrades and enhancements – and a positive return on your software investment.

The continual search for the "new and improved."

Software, by nature, is never a finished product; it's always in an evolutionary stage, being as effective as it can be until exceeded by the next "new and improved" generation. As a dedicated designer and developer of software for education, SANS tackles the evolutionary process head-on by continually developing, improving and expanding our software solutions to better meet educators' needs.

Teaching methodologies, as well as national, state and local standards often demand change to produce more positive educational outcomes. Even universally accepted technology standards and operating system parameters frequently change. SANS keeps one step ahead of those frequent changes by continually evolving software functionality.

If educational institutions are to make financially sound investments with their software purchases, then upgrades must be an integral part of that plan. With SANSSupport, schools are virtually guaranteed a positive ROI on technology purchases, because the technology will always be up to date.
